

What's Up, Doc? †

October, 2015

Dr. Aaron B. Clevenson, Observatory Director, Insuperity Observatory

This document tells you what objects are visible this next month for many of the Astronomical League Clubs. If you are working on one of the more advanced club, then I assume that you are tracking where your objects are all the time. I have concentrated on the common and starter level clubs. This information is based on 9 PM.

Other Clubs (of the Solar System)

Planetary/Solar System – These are the tasks that can be done this month:

Mercury, Venus, Mars, and Jupiter are not visible during the evening hours in October.

Sun – Any clear day is a good time to get those sunspots. Sunset is at 18:49.

Moon:

The Maria requirement can be done any time the moon is visible. Look before 10/5 and after 10/19 for the fullest views.

The Highlands requirement can be done at the same time.

The Crater Ages requirement is best done on 10/18 or 10/19.

The Scarps requirement is best done on 10/20.

Occultations occur all the time, the bright ones can be found on the internet. Objects disappear on the East side of the moon.

Asteroids – Course Plotting and Measuring Movement requirements can be done at any time on any asteroid. See above to identify the bright ones this month.

Ceres is in Sagittarius and sets at 00:39 by mid-month.

Saturn is in Libra and sets at 21:07 by mid-month.

Uranus is in Pisces and is up all night.

Neptune is in Aquarius and sets at 04:03 by mid-month.

Pluto is in Sagittarius and sets at 23:54 by mid-month.
