

What's Up, Doc? †

April, 2018

Dr. Aaron B. Clevenson, Observatory Director, Insuperity Observatory

This document tells you what objects are visible this next month for many of the Astronomical League Clubs. If you are working on an advanced club, then I assume that you are tracking where your objects are all the time. I have concentrated on the common and starter level clubs. This information is based on 9 PM CDT.

Other Clubs (of the Solar System)

Planetary – These are the tasks that can be done this month:

The Sun sets at 1951 by mid-month.

Saturn, Neptune, and Pluto will not be visible during the evening hours. They are all too close to the sun or late night or morning stars.

Sun – Any clear day is a good time to get those sunspots. But things have been very sparse.

Moon:

The Maria requirement can be done any time the moon is visible. Look before 4/8 and after 4/22 for the fullest views.

The Highlands requirement can be done at the same time.

The Crater Ages requirement is best done on 4/21 and 4/22.

The Scarps requirement is best done on 4/23.

Occultations occur all the time, the bright ones can be found on the internet. Objects disappear on the East side of the moon.

Asteroids – Course Plotting and Measuring Movement requirements can be done at any time on any asteroid. See above to identify the bright ones this month.

Mercury is in Pisces and sets at 2047 mid-month.

Venus is in Pisces and sets at 2044 mid-month.

Mars is in Sagittarius and rises at 0235 mid-month.

Ceres is in Cancer and sets at 0400 mid-month.

Jupiter is in Libra and is rises at 2335 mid-month. Jupiter requirements can be met any time that Jupiter is visible.

Uranus is in Pisces and sets at 2133 mid-month.

Lunar

Key timings are indicated below:

New, 4/15 4 days, 4/19 7 days, 4/22 10 days, 4/25 14 days, 4/29
