May, 2017

Dr. Aaron B. Clevenson, Observatory Director, Insuperity Observatory

This document tells you what objects are visible this next month for many of the Astronomical League Clubs. If you are working on one of the more advanced clubs, then I assume that you are tracking where your objects are all the time. I have concentrated on the common and starter level clubs. This information is based on 9 PM.

Other Clubs (of the Solar System)

Planetary – These are the tasks that can be done this month:

Mercury, Ceres, Uranus, and Neptune will not be visible during the evening hours.

Sun is in Taurus and sets at 2005 mid-month. Any clear day is a good time to get sunspots.

Moon:

The Maria requirement can be done any time the moon is visible. Look before 5/18 and after 5/3 for the fullest views.

The Highlands requirement can be done at the same time.

The Crater Ages requirement is best done on 5/2 or 5/3.

The Scarps requirement is best done on 5/4.

Occultations occur all the time, the bright ones can be found on the internet. Objects disappear on the East side of the moon.

Venus is in Taurus and sets at 2235 mid-month.

Mars is in Capricorn and rises at 0050 mid-month

Asteroids – Course Plotting and Measuring Movement requirements can be done at any time on any asteroid. See above to identify the bright ones this month.

Jupiter is in Libra and is up all evening mid-month.

Saturn is in Sagittarius and rises at 2317 mid-month. All of the Saturn requirements can be done any time Saturn is visible: marking, rings, moons, etc.

Pluto is in Sagittarius and rises at 0028 mid-month.

Lunar

Key timings are indicated below:

New, 5/25 4 days, 5/29 7 days, 5/3 10 days, 5/6 14 days, 5/10

Old moon in new moons arms – before 1446 on 5/28, ~10 % illuminated. (72 hr > New)

New moon in old moons arms – after 1446 on 5/22, ~10 % illuminated. (72 hr < New)

Waxing Crescent – before 0646 on 5/27, ~4 % illuminated. (40 hr > New)
