

What's Up, Doc? †

September, 2016

Dr. Aaron B. Clevenson, Observatory Director, Insuperity Observatory

This document tells you what objects are visible this next month for many of the Astronomical League Clubs. If you are working on one of the more advanced club, then I assume that you are tracking where your objects are all the time. I have concentrated on the common and starter level clubs. This information is based on 9 PM. All times are US Central Time.

Other Clubs (of the Solar System)

Solar System – These are the tasks that can be done this month:

Sun – Any clear day is a good time to get those sunspots.

Sunset mid-month is at 1923.

Moon:

The Maria requirement can be done any time the moon is visible. Look before 9/23 and after 9/8 for the fullest views.

The Highlands requirement can be done at the same time.

The Crater Ages requirement is best done on 9/7 and 9/8.

The Scarps requirement is best done on 9/9.

Occultations occur all the time, the bright ones can be found on the internet. Objects disappear on the East side of the moon.

Asteroids – Course Plotting and Measuring Movement requirements can be done at any time on any asteroid. See above to identify the bright ones this month.

Mercury is not visible in the evening sky this month.

Venus is in Virgo and sets at 2044 mid-month.

Mars is in Ophiuchus and is up all evening mid-month.

Ceres is also in Aquarius and rises at 1842 mid-month.
